

CRUSHED GRAIN

PRODUCT DESCRIPTION:

WSF Crushed Grain is a combination of whole Barley and Wheat that has been crushed to break the kernels to smaller pieces. This is to increase digestibility that makes the starch more accessible, particularly for animal feed. This can be fed to Dairy, Beef, Sheep and Deer

FEEDING RECOMMENDATIONS:

When introducing stock, start between 0.5kg-1kg. Do not increase feeding levels too quickly. Commence at low levels and gradually build up to the required intake. Offering a fibre source in conjunction with lush pasture can be beneficial. Prevent gorging by trying to ensure each cow receives their allocated allowance. Feeding Starch can help increase milk yield and milk protein levels. A good way to balance high protein feeds, but must be crushed for cows to utilise it.

This feed option has a high level of starch that can increase the risk of acidosis. Care must be taken, so introduce slowly and gradually build up to the required intake. **DO NOT FEED AD-LIB**. Consult your local WSF Representative for more information

STORAGE AND HANDLING :

Like all feedstuffs, Crushed Grain should be stored dry, in bulk bins or placed on cement tabs (away from vermin and protected from the weather).

INGREDIENTS SELECTED:

Barley, Wheat.

TYPICAL ANALYSIS: (approx.)

ME	13.5	MJ ME/KG
Crude Protein	12.5	%
NDF	12.0	%
Startch/Sugar	67.0	%
