

PALM KERNEL EXPELLER (PKE)

PRODUCT DESCRIPTION:

Palm Kernel Expeller (PKE) is the by-product of oil manufacture of the palm berries. It has the ability to replace some higher cost protein sources while providing cost effective energy. The product originates from Asia and the Pacific. PKE is safe and a good grass substitute when short of feed.

Palm Kernel Expeller can provide extra protein and fat in summer when pasture protein and digestibility can be low. PKE is a good source oil and rumen fermentable fibre, which usually improves butter fat test. Although high in Natural Detergent Fibre, PKE does not cause significant pasture substitution owing to the high level of rumen by-pass NDF in PKE. PKE contains nearly no starch and can be safely fed with adlib access in the paddock.

When feeding PKE, for increased palatability Winton Stock Feed can include molasses into the PKE blends either via silo blend deliveries or bulk tip deliveries. This can also increase digestibility.

FEEDING RECOMMENDATIONS:

Normal feeding rates are 2-3kg DM/ day, higher rates up to 6kg DM are possible in case of feed shortage or drought, providing the cows have 50% of their diet as forage to ensure adequate effective fibre. PKE is low starch and sugar, so cows can be fed ab lib without risk of acidosis.

STORAGE AND HANDLING :

Like all feedstuffs, Palm Kernel should be stored dry, in bulk bins or placed on cement slabs, away from vermin and covered and protected from the weather accordingly.

TYPICAL ANALYSIS: (approx.)

ME	11-11.5	MJ / kg / DM
Crude Protein	16-18	%
NDF	65-75	%
Dry Matter	90	%
Fat	5-8	%
