

SOYBEAN MEAL

PRODUCT DESCRIPTION

Soybeans are a high protein legume and are the most commonly used protein supplement in dairy diets throughout the world. The Soybean meal is very palatable, nutrient dense, high in digestibility, and a relatively consistent source of protein. It has an excellent amino acid profile and is a concentrated source of protein and energy.

Protein supplements like soybean meal can be used to balance out low protein pasture and forages. Contains around 50% protein of which 35% is rumen undegradable ("by-pass") and 65% is rumen degradable .

Soybean meal is rich in lysine, an essential amino acid for milk production and of the common vegetable proteins used in animal feeds. Soybean meal has the highest percentage of essential amino acids (47.6 per cent) as well as being a good source of phosphorus.

A cost effective protein source , Soybean Meal is a key ingredient in dairy cow rations to support high milk production and cow health

FEEDING RECOMMENDATIONS:

Normal feeding rates will be around 0.5-2 kg per head per day depending on protein requirements. Soybean meal can be mixed with silage and fed on the feed pad. It can also be fed via the grain feeding system in the dairy shed.

Consult your local WSF Representative to work out the most optimal inclusion level for your particular situation.

STORAGE AND HANDLING :

Like all feedstuffs, Soy Bean Meal should be stored dry, in bulk bins or placed on cement slabs, away from vermin and covered and protected from the weather accordingly.

TYPICAL ANALYSIS: (approx.)

ME	12.5-13.5	MJ/KG/DM
Crude Protein	46-52	%
Crude Fat	1.5-2.5	%
Dry Matter	90	%
NDF	65-67	%
