

TAPIOCA

PRODUCT DESCRIPTION:

Tapioca Pellets are a high-starch feed ingredient produced from the roots of the tapioca, manioc or cassava plant. After harvest, the roots of the plant are sliced into chips and dried in the sun.

Subsequently the chips are pelleted and are mainly utilized for the production of starch for human and industrial uses and Stockfeed applications. Because it is a starch-rich feed, tapioca is used as a substitute for grains in practically all livestock rations and it can be used in conjunction with grain.

FEEDING RECOMMENDATIONS :

Best fed in conjunction with moderate and slow fermentable carbohydrates to prevent acidosis and to provide consistent ruminal fermentation over time. Total dietary levels of starch and soluble sugars, NDF and effective fibre should be monitored when feeding.

Not suitable for ad lib feeding as it puts cows at risk of ruminal acidosis. Consult your local WSF Representative to work out the most optimal inclusion level for your particular situation.

STORAGE AND HANDLING :

Like all feedstuffs, tapioca should be stored dry, in bulk bins or placed on cement slabs, away from vermin and covered and protected from the weather accordingly.

TYPICAL ANALYSIS: (approx.)

ME	12.5	MJ ME/kg
Crude Protein	3 - 5	%
NDF	25 - 30	%
Starch	40 - 50	%
Dry Matter	90	%
